Hi,

Julian Zappia has created an account with Statcounter for the website diplomaticweek.org and would like help installing the Statcounter WordPress plugin.

Installing the WordPress plugin

These instructions have been tested with WordPress 2.8.2 and 3.1.

- 1** Log in to your WordPress admin area and go to 'Plugins > Add New'
 - 2** Search for 'Statcounter'. The first result should be 'Statcounter - Free Real Time Visitor Stats'
 - 3** **Version 2.8.2** Under 'actions' click 'Install'. In the popup, click the red 'Install Now' bar.
Version 3.1 Click 'Install Now' at left hand side
-  Depending on your installation, you may have to enter your FTP login details

Click 'Activate Plugin'

Go to 'Settings > Statcounter' and enter your project id **6245075** and your security code **f0254c97** and hit 'Update Options'

Need Help?

If you have any questions or need help getting started, simply reply to this email or contact us at support@statcounter.com.

Aodhan and the Statcounter team.
